## Swing flies for shad

We dig into fly fishing for shadows, crocodile hunting and Ritz-Carlton with Mark Benson. Mark walked us through the stages of catching shadows along with some other shenanigans including crocodile hunting. Shadow fishing has many similarities to steelhead fishing so let's dig into it. This episode is another level with our chat at the Ritz-Carlton 18-hole Greg Norman Golf Course and Bass Course. You can do it all on a journey including crocodiles that are out and about. Catch Curated TipsClick below and listen to the shadow fly-fishing padcats with Mark Benson: Find the show: itunes | Stitches | OvercastSubscribe on AndroidSubscribe on Apple PodcastsSubscribe on Google PodcastsSubscribe via RSS (Listen to all Archived Episodes Here)Show SponsorsHosted Fly Fishing Trips with DaveClick here to find out how to join the next big tripShow Notes shad fly fishing with Mark Benson05:03 – Flip Pallot was on the podcast in episode 70 and told the story how He lived through the storm in 1992.08:50 - marking the head guide for the Ritz-Carlton and for bass fishing at the Ritz Properties.16:30 - we talk about the history of shadow life here and what a good run and fishing day is like .17:40 - the best flies resemble Charlie's crazy low-nose. Here's standard crazy Charlie Video.37:00 - Mark notes the Delaware River and shadow fishing. There are many fly fishermen using drowning lines in this area with deep and heavy water. Quite a little different from John St. that we cover .41:40 - I noted the John McCluskey episode and how John put together before traveling in Georgia for Alaska.45:55 - Fish Founded by John McPhee is a great resource to check out Off for Shad.50:40 - Shingle Creek is the water head of Florida's Everglide and his initial brand flow is fish.51:10 - we talk about golf/bass fishing or fish and chips aka bass and bird. It's so cool. The course is open to the public so if you go golf and fly fishing this point.1:01:10 – The Beatles are branded over Elvis and Mexican food goto.1:03:40 – The new ground by Eckhart Tolle is all about focusing on now. You can reach mark on Mark Benson outdoors.Sources noted on ShowThe Fishes founded by John McPheeA New Earth by Eckhart TolleVideos noted in ShowThe Crazy CharlieThe Beatles - RevolutionPhoto via Good Morning American (-59662424)Conclusion with Mark BensonWe get into everything from alligator hunting to the easy steps to getting into some amazing shading action. Shadow in Flight is a dedicated site for flying fishing for shadows, and I'm passionate about sharing everything that I learn with who visits. The site is full of resources, shadow flight patterns, fishing reports and more, but if you're just looking to get your feet wet, then let's start with the basics. There are six articles included in this series that will help you successfully target shadows on the fly. While there is some emphasis on the waters of my home, The River of St. Johns, the information within each of these six articles will help you become a more confident and competent shadow fisherman, regardless of where you target the shadow on the fly. The Basics: So, what exactly is a Shad?– In this article we will take a look at some basic biology of the American and Hickory Shad to get a better understanding of just how the fish ticks. Fly bars for flying fishing for shade - in this article we will discuss what kind of flying rods that you can use for flying fish for shade. I'm willing to bet that you have something that fits the bill flying rings for fishing shadows – in this article we find that the ring for the flying rod is not only for storing the line when you're flying fishing for shade, but it can be an integral part to landing fish. Flight lines for shadows – In this article I dig in to different types of flight lines we can use the target to successfully shade on the flying rod. From single-hand bars to two hand bars, this article will help you choose the best flight line for your application. Shadow catching techniques in flight – a very detailed article on the techniques used when flying fishing for shade. Learn how to swing flies, mend, and recover to deliver flies to the shadows and elicit strike. Flight patterns for shadows – learn about what kind of flies that shade like the best and normally key in. Want to know what flight I choose if I can only have one when flying fishing for shade? I'll tell you in this article! Now, for happy flies. Something I'm going to make here, and now the flies that follow them all have a name, I'm sure you've noticed on your travels that most of the shady flies are namless. why? Are these fish so blindly dumb that they will fly before them? no. Can you simply fling anything and expect a glorious battle to follow immediately? no. So wouldn't it be a good name to spread stories to your buddies? yes. I agree that there are times when these fish bite the damn thing near anything but there are times when trout, bass, salmon and other fish will behave the same way. Maybe not quite as often as shadows but they still do. When we relate to a story on fishing one day for trout, do we simply say we've got them on an ol' salmon flight? no. So from here on out, let's respect these flies a little bit, okay? There are times when certain colors and patterns will be removed from the production of others. If you see your friend running them in a fist and you're curious about what he's got, a shadow fly! It won't be enough anymore, will it? no. Okay, so let's keep going, my flies box is full of different flies, but if I just... A few flies below are limited to get ninety. You're not. Mouse your mouse over the images to get the name of the fly. Click on the flies to get a closer look. (The LaHave River has many regulations that change during the season. Tie the instructions? Click here. Here is a well-stored box of shadow flies. 05-30-2018, 10:43 AM #1 As many of you already know the American River is providing us with some excellent flying fishing opportunities now for shade and stripes. The video was filmed during Memorial Day weekend while I was fishing with my friends. Great day and great company. Shadow performances will continue until mid-July. Water flows are suitable for Wadi. Good luck and stay safe! -JP Jeff Putnam JP Flyfishing Schools 05-31-2018, 02:06 am #2 Originally by Jeff Putnam As many as you already know American River providing us with some excellent flying fishing opportunities now for shade and stripers. The video was filmed during Memorial Day weekend while I was fishing with my friends. Great day and great company. Shadow performances will continue until mid-July. Water flows are suitable for Wadi. Good luck and stay safe! - J. good job! Did you see a big stripe when fishing was shady? I've got some monsters there over the years... 05-31-2018, 09:13 #3 I don't see any more than 6-8 pounds. I kept an eye open for them but the water was so funky unfortunately, this week the fishermen in the middle/bottom river do damage to the big chickens. I rowed within a few feet of a diver and noted how many great stripes I see compared to the 80/90 he said that's a good thing and they're helping the salmon population by removing the great spawning stripes. I tried to point out that the historical fish count numbers showed a healthy salmon population when the striped population was also strong. He didn't want to hear and hear the pigeon underwater when I was in the middle of a sentence, I think we should spend some time researching historical populations of migratory fish from the California Valley rivers to get a better understanding of the impact we've had on them over the last 100 years. The fish and game website has information. There are currently less than 1% of the historic number of fish including salmon and steelheads migrating to the CA rivers! That number bothers me every day, it goes far beyond catching and releasing (which is very important) to environmental issues including dedicated water flows, dam impacts, politics and much more. Hopefully we will change our attitude of: there is an endless supply of fish for me rather than preserving the last remaining fish stocks. ill see you on the water. -JP Jeff Putnam JP Flyfishing Schools 05-31-2018, 11:38 AM #4 Originally Posted by Jeff Putnam I didn't see any over 6-8 lbs. The week the fishermen are the ones in the middle/lower river doing damage to the large chicken. I rowed within a few feet of a diver and noted how many great stripes I see compared to the 80/90 he said that's a good thing and they're helping the salmon population by removing the great spawning stripes. My blood boils! I say those kids' hunting trophy is definitely a bitch! Don't tell me he'll be eaten JP is a statement of what was past for fishing rings to be true and it happens not only to salmon, stripp, steelhead and shadow (yes shadow)... It happens to be a lot of fish! Heck at AU they are trying to figure out how to breed tuna in captivity. I'm not telling you what I don't know about, a sad time when there's no importance to doing some truth seeking research! The majority of selfish people are what this world comes to. Thanks for JP! Aaron - I own a time machine, but it only moves forward at regular speed... Lots of rivers to fish a little time! 05-31-2018, 05:45 PM #5 JP! Shadow Fishing has been stellar so far for me! 06-01-2018, 12:13 am #6 Originally by Jeff Putnam I don't see any more than 6-8 pounds. I kept an eye open for them but the water was so funky unfortunately, this week the fishermen in the middle/bottom river do damage to the big chickens. I rowed within a few feet of a diver and noted how many great stripes I see compared to the 80/90 he said that's a good thing and they're helping the salmon population by removing the great spawning stripes. I tried to point out that the historical fish count numbers showed a healthy salmon population when the striped population was also strong. He didn't want to hear and hear the pigeon underwater when I was in the middle of a sentence, I think we needed to spend some time researching historical immigrant fish populations from the California Valley rivers to get a better understanding of our impact on. in the last 100 years . Hopefully we will change our attitude of: there is an endless supply of fish for me rather than preserving the last remaining fish stocks. ill see you on the water. -JP there are a lot of holes in logic of pro-striped eradication mentality. But even if you isolate his argument about helping salmonids... This logic is flawed because in fact, larger chickens eat very little salmon smolts. The energy equation just doesn't benefit it... A 30lb bass cannot be spent 500 calories of energy to catch and eat a 20-calorie fish. It's from crying big chicken monkeys tend to eat slower moving fish and invertebrates (pike minnow, sucker, sunny fish, trout, lamprey eels, crawdads, etc...) in fact, during this time of year when salmon smolts are more common in the river, there's also a million, silly shadows in the river, all hiped up in hormones and prone to do stupid shit we animals often do when we have sex. This way, they are much easier to catch and calorie-reward fodder for great looking stripes. The smaller 'schoolie' is far more maneuverable and that much lower calorie requirements are more successful at sucking smolts but since its smaller body size requires fewer fish daily to maintain it, the dynamic balance between predator and prey is maintained and the two species are able to successfully coexist. Unfortunately, The Gunner's The Gunner's (not Fisher's) wants nothing to do with schools that can wither significant impressions, s/she wants to shoot and kill all the biggest, and more fecund, striped-sized prizes in the system. And the gunner wants nothing to do with the facts, and instead chooses to ignore science because they don't support his selfish and self-centered desires... Unfortunately, our agencies rely on to protect our fisheries, CDFW, USFWS, DWR, BOR are complicit in the eradication stripe mentality because they are too selfish, breath-driven motivation... Who's right and who's wrong? I find that with most issues... Credit goes to the side that the agenda has no greater benefits or benefits rather than than the self-serving agenda... Clearly, the gunners bought and sold agencies by Governor Brown that self-serving agenda things down to (without science) last edited by STEELIES/26c3; 06-01-2018 at 12:15 am. 06-01-2018, 10:06 am #7 Originally posted by Jeff Putnam I don't see any more than 6-8 pounds. I kept an eye open for them but the water was so funky unfortunately, this week the fishermen in the middle/bottom river do damage to the big chickens. I'm within a row Stepped out of a diver and mentioned how many great stripes I see compared to 80/90 he said that's a good thing and they're helping the salmon population by removing great spawn stripes. I tried to point out that the historical fish count numbers showed a healthy salmon population when the striped population was also strong. He didn't want to hear and hear the pigeon underwater when I was in the middle of a sentence, instead, ask the person how many letters they send or attend meetings that support legislative work to improve the habitat of Salmond, Steelhead, etc. Partners. Lowest common name..... Thanks for trying to train, however. Last edited by OceanSunfish; 06-01-2018 at 10:16 am. In.
